Maximum Mac: Think Like a Mac Geek Stay Safe Out There

Mac computers combine power, ease of use, and stylish packaging. But most of us use only a tiny fraction of our Macs' capabilities. With this two-part session, increase your productivity, have more fun, and get the most out of your investment. Joe starts by teaching you how Mac geeks think, what tools and techniques they use, and how they solve problems. Then he covers essential Mac security topics including backups, dealing with passwords, and staying safe on the Internet. For beginners or pros.

Joe Kissell is a best-selling, award-winning author and technologist and a popular speaker at Mac-themed events. He writes primarily about Macs and iOS devices, and authored more than two dozen *Take Control* books, including *Take Control of Working with Your iPad*. Since 2007, he has appeared on the MacTech 25 list of the most influential people in the Mac community. He's a senior editor of TidBITS, contributes frequently to Macworld, and previously spent ten years in the Mac software industry.

Cosponsored by Hawaii Macintosh & Apple Users' Society (HMAUS).

iPAD ESSENTIALS: Getting to Know Your First iPad Coloring Outside the Lines Living on a Desert Island with Only Your iPad

Apple's iPad may be the biggest thing in computing since the PC. It's compact, inexpensive, and multitalented—but it's also an entirely different experience from a Mac or PC. In this three-part session, from the basics right through to advanced iPad geekery, Joe shows you the best ways to use your iPad for work or play, what apps you can't live without (and which ones you should avoid), what accessories will make your life easier, and whether you can get rid of your laptop and use only an iPad.
